

CANCER RESEARCH FUNDING IS IMPORTANT TO OUR NATION'S HEALTH AND ECONOMIC WELL-BEING

GOOD FOR OUR HEALTH:

- The total number of US cancer deaths declined last year thanks to decades of research and prevention efforts led by NIH and CDC.
- Numerous studies show that we can dramatically reduce death and suffering from cancer, including the most deadly cancers, if funding for research and prevention is increased.

The President's vision of doubling cancer research funding over the next eight years is a critical step toward conquering cancer – which still kills more than 560,000 Americans annually.

CANCER RESEARCH.
GOOD FOR OUR HEALTH. GOOD FOR OUR ECONOMY.

GOOD FOR OUR ECONOMY:

- Cancer cost the nation \$228 billion last year.
- Stable, sustained investments in research will help us learn how to stop or slow cancer before it takes its toll on us, our families and our economy.
