Early detection is key to preventing cervical cancer

HPV can cause cell changes on the cervix. These changes may lead to cervical cancer if they aren't found and treated. Regular screening can help find problems early and prevent cancer from developing. #cervicalcancer #paptest #HPVtest #cancerprevention <https://www.nccc-online.org>

Regular screening is essential to preventing cervical cancer

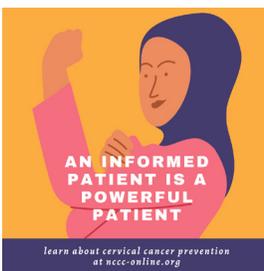

But about 1 in 4 women haven't been screened as recommended

Don't fall behind! Cervical cancer is preventable when problems are found early and treated. Make sure you are up to date on cervical cancer screening. #cervicalcancer #paptest #HPVtest #cancerprevention <https://www.nccc-online.org>

The HPV vaccine is cancer prevention

Did you know? HPV isn't just about warts. It can lead to different types of cancer. Protect yourself and others by getting the HPV vaccine! #HPV #HPVvaccine #cancerprevention <https://www.nccc-online.org>

AN INFORMED PATIENT IS A POWERFUL PATIENT

Learn about cervical cancer prevention at [nccc-online.org](https://www.nccc-online.org)

What do patients become when they're better educated? Empowered! Understanding Cervical Cancer Prevention is an interactive tool covering what to expect during the screening process & with follow-up exams and procedures. #StopHPVCancer <https://www.nccc-online.org/dots/index.html>

WHO SHOULD GET THE HPV VACCINE?

- GIRLS
- BOYS
- BOTH

The HPV prevents cancer in both females and males. This is why it is recommended for both boys and girls at ages 11-12. Early vaccination is best. #HPV #HPVvaccine #cancerprevention <https://www.nccc-online.org>
